

LESSON 13
Division By A Fraction

Dividing by a fraction is the same as multiplying by its inverse.

Example 1:

$$\frac{3}{7} \div \frac{4}{5}$$

Solution: Invert the fraction that comes after the division sign.

Invert $\frac{4}{5}$ To $\frac{5}{4}$ Then Multiply

$$\frac{3}{7} \times \frac{5}{4} = \frac{15}{28}$$

Change The Division To Multiplication And Find A Reduced Answer
